VALVE EFFICIENCY

JTP brassware uses innovative, cutting edge valve technology to make sure your water reaches you at the optimum temperature every time.

Vernet Efficiency

The CA43 cartridge will provide the best temperature regulation, whilst complying with all current safety standards and marques.

The cartridge is uniquely designed, with an optimised thermostatic element and advanced regulation components.

Safety Assured

Every cartridge features an anti-scald function and this is tested on each cartridge.

Multi Use

Vernet have developed a single geometry that can be used in many cartridges from baths, showers, thermostats and various flow capacities. The standard temperature range 15-60°C (59-140°F) but other temperature ranges can be accommodated for upon request.

Longer Life

The advanced thermoplastic polymer inhibits the build-up of limescale, thus, extending the life of the cartridge.

Pre-set Temperatures

Specific temperatures can be pre-set within the cartridge so no test rig is required in the valve.

Isolating Valves

JTP concealed valves are installed with isolating point for ease of maintenance when changing cartridges. The water can be isolated from the valve itself to save time and money.

FLOW REGULATORS

JTP offers a range of affordable water saving devices and flow regulators to help you use water more economically.

Flow regulators control the flow of water by responding to signals generated by independent devices like flow meters or temperature gauges fitted inside showers and taps. They are manufactured using certified materials to avoid splash and maximize water and energy savings.

There are so many reasons we need to be mindful of our water usage – the huge demands placed on our water supplies have caused the government to launch legislation regulating the flow of water supplied by taps and showers in new homes.

Equally, we all want to be kinder to the environment by using water efficiently to contribute to a greener future. Conserving water is good news for both the planet and our pockets, as reducing water consumption helps us to save money on household bills.

All of our water saving devices and flow regulators conform to new legislation and come with Water Regulation Advisory Scheme approval to reassure you of their eco credentials.

LP 0.2	- 0.2	bar pressure	(very low pressure)
MP 0.5	- 0.5	bar pressure	(medium pressure)
HP 1	- 1	bar pressure	(high pressure)
HP 2	- 2	bar pressure	(high pressure)
HP 3-5	- 3	bar pressure	(high pressure)

Please refer to this pressure guidance on each of our products

All the below constant flow controls reduce dynamic pressure avoiding splash and maximise the water/energy saving and system balancing. They are produced from materials which have certification meeting the requirement of BS5490 “Materials for use with contact to potable water”

2.3 The Order shall only be deemed to be accepted when the Company issues a written acceptance of the Order, at which point the Contract shall come into existence.
